Art Unit: 1646

1) Claims 5 to 9, 11, 12 and 14 to 17 are pending in the instant application. Claims 5 to 9 have been amended and claims 15 to 17 have been added as requested by Applicant in Paper Number 2, filed 26 May of 2000.

2) Claims 5 to 9, 11, 12 and 14 to 17 are objected to as reciting an improper Markush Group. M.P.E.P. 803.02 states that:

“Since the decisions in *In re Weber* **, 198 USPQ 328 (CCPA 1978); and *In re Haas*, 198 USPQ 334 (CCPA 1978), it is improper for the Office to refuse to examine that which applicants regard as their invention, unless the subject matter in a claim lacks unity of invention, *In re Harnish*, 631 F.2d 716, 206 USPQ 300 (CCPA 1980); *Ex Parte Hozumi*, 3 USPQ2d 1059 (Bd. Pat. App. & Int. 1984). Broadly, unity of invention exists where compounds included within a Markush group (1) share a common utility and (2) share a substantial structural feature disclosed as being essential to that utility.”

3) Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 5 to 9, 11, 12 and 14 to 17, in so far as they are drawn to a isolated nucleic acid encoding an alpha 2 neuronal nicotinic acetylcholine receptor subunit, classified in class 536, subclass 23.5.
- II. Claims 5 to 9, 11, 12 and 14 to 17, in so far as they are drawn to a isolated nucleic acid encoding an alpha 4 neuronal nicotinic acetylcholine receptor subunit, classified in class 536, subclass 23.5.
- III. Claims 5 to 9, 11, 12 and 14 to 17, in so far as they are drawn to a isolated nucleic acid encoding a beta 2 neuronal nicotinic acetylcholine receptor subunit, classified in class 536, subclass 23.5.

Art Unit: 1646

IV. Claims 5 to 9, 11, 12 and 14 to 17, in so far as they are drawn to a isolated nucleic acid encoding a beta 3 neuronal nicotinic acetylcholine receptor subunit, classified in class 536, subclass 23.5.

V. Claims 5 to 9, 11, 12 and 14 to 17, in so far as they are drawn to a isolated nucleic acid encoding a beta 4 neuronal nicotinic acetylcholine receptor subunit, classified in class 536, subclass 23.5.

The compounds that are inventions I to V are nucleic acids encoding six different proteins each of which can be made and used without the other. Lack of unity is shown by the fact that these six proteins lack a common utility which is based upon a **common special technical feature which is lacking from the prior art** and which is disclosed as the basis for that common.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1646

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
